

September 9, 2020

Dear Families,

In our continued efforts to protect the residents and staff at The Piper, we will be doing a full disinfection of all resident apartments and common spaces. We are bringing in a company that uses antimicrobial technology to provide long-lasting protection from harmful pathogens, viruses and bacteria for up to 90 days.

This serves as a secondary level of protection in addition to our current cleaning methods and disinfecting practices. It will not lessen our need to continue daily cleaning and sanitizing.

We will be doing our first treatment on Thursday, September 10, 2020 and will repeat this in three months. Every resident apartment will get sprayed, and residents will be required to be out of their apartment for 30 minutes. We will be providing group activities during these times or scheduling around mealtimes.

The product is considered safe and non-toxic.

Sincerely,

Courtney Kabot
Director of Marketing
